DETAILED ACTION

This Office Action is in response to the Election filed February 20, 2009 for the above identified patent application.

Election/Restrictions

1. Claims 2-4 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on February 20, 2009.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figures 13 and 14 should be designated by a legend such as --Prior Art--because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 10/538,299

Page 3

Art Unit: 3656

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: "L₁" and "S_A" (claim 1). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

5. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Application/Control Number: 10/538,299 Page 4

Art Unit: 3656

6. The abstract of the disclosure is objected to because it should be a single paragraph in the range of 50 to 150 words, and the implied phrases, such as "the present invention" (line 1 and elsewhere) should be deleted. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kabayashi (USPub 2002-0037123) in view of Iwata (JP 2001-304273).

Kabayashi discloses a four-point contact ball bearing comprising: an outer member which has a raceway surface (1) on an inner periphery thereof, an inner member which has a raceway surface (2) on an outer periphery thereof, plural balls (3) disposed in a row between the outer and inner members, and a retainer (4) for disposing the plural balls at equal intervals in a circumferential direction thereof, the balls being in two-point contact with each of both raceway surfaces of the outer member and the inner member, wherein a ratio of the diameter d_B of the balls 3 to the pitch circle diameter PCD is dB/PCD=0.012; and an axial gap between said outer race 1 and said inner race 2, which are in contact with each other through the balls is set at a negative value.

Application/Control Number: 10/538,299 Page 5

Art Unit: 3656

Kabayashi does not disclose the relationships:

(A) $1.5 \le L1/d \le 2.1$, where d designates a diameter of the ball and L1 designates a distance between centers of adjacent ones of the balls on the pitch circle:

- (B) 0.54 ≤ r/d ≤ 0.59, where d designates a diameter of the ball and r designates a curvature radius of each of grooves serving as the raceway surfaces;
- (C) $15^{\circ} \le \alpha \le 25^{\circ}$, where α designates a contact angle between the ball and each of the raceway surfaces of the outer and inner races.
- (D) -0.050 mm \leq SA \leq 0 mm, where SA is the gap between the outer race and the inner race.

The prior art to Iwata discloses a four-point contact ball bearing, where a ratio of the radius of curvature of the raceway surface of an outer race to the diameter of a ball is within the range of 0.535 to 0.56; and the contact angle between the ball and the outer and inner races is within the range of 20 degrees to 30 degrees. It would have been obvious to one of ordinary skill in the art at the time the invention was made to configure the bearing of Kabayashi with the relationships r/d and α , as disclosed by Iwata, motivation being to provide good bearing life by limiting the relationship between the curvature radius of the grooves serving as

the raceway surfaces and the diameter of a ball as well as the range of numerical value of the contact angle between the ball and the raceway surfaces.

Page 6

It would have been within the skill of one in the art to configure the bearing of Kabayashi with the relationship $1.5 \le L1/d \le 2.1$, motivation being to provide a predetermined bearing operating capacity for a particular application.

It would have been within the skill of one in the art to configure the bearing of Kabayashi with the relationship $-0.050 \text{ mm} \le \text{SA} \le 0 \text{ mm}$, since Kabayashi discloses SA is a negative value and discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980)..

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Joyce whose telephone number is (571) 272-7107. The examiner can normally be reached on Monday - Thursday 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Ridley can be reached on (571) 272-6917. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
